Java

```java
package q10775;

public class GuessShort {
    public static void main(String[] args) {
        short shortValue = Short.parseShort(args[0]);

        if (Byte.MIN_VALUE <= shortValue &&
            shortValue <= Byte.MAX_VALUE) {
            System.out.println("The short value " + shortValue +
                    " is in the range of a byte");
        } else {
            System.out.println("The short value in args[0] is: " +
                    shortValue);
        }
    }
}

```
